

How to Wire Your Bus Board

Stripe side →

Jumper for On Board +5V →

→ -12V Terminal
→ Ground
→ +12V Terminal
→ External +5V Terminal

→ -12V Terminal
→ Ground
→ +12V Terminal
→ External +5V Terminal

If you plan on using an external +5V source, like from your power supply, **DO NOT POPULATE THE +5V JUMPER!** It will cause damage to your equipment.

The three onboard LEDs will light up (+12V, -12V, and +5V) if the power rails are properly hooked up. Be sure to test your wiring before plugging in your eurorack modules.

The bus boards can be daisy chained to one another. The two terminal blocks pass through the power rail for easy installation.
